

Advisera vs. Self-Implementation

Utilize our convenient comparison matrix for a speedy analysis of the advantages and disadvantages of self-implementation of ISO 27001, ISO 9001, ISO 13485, ISO 45001, ISO 14001, ISO 20000, IATF 16949, ISO 17025, AS9100, EU GDPR, or EU MDR without any expert assistance. You can also analyze the advantages of using our experts' knowledge to help you complete your implementation or compliance project.

Our comparison matrix will quickly help you see which alternative is best for your company, considering overall budget and effort, difficulty, and comprehensiveness of the documentation.

So, what will it be? Complete your implementation or compliance project all by yourself, or with the group of professionals from Advisera?

| Self-implementation | Advisera products & services |
|---|---|
| "Our employees can design and develop the documents, and that won't cost us a penny." | Our study demonstrates that doing it on your own can cost 500% more than purchasing our toolkit. Your employees would consume several hundred man-hours developing documents from scratch. These hours could be productively used in other areas for the growth of the company. |
| "Our employees are well organized and have sufficient experience in similar projects. They can make all these documents rapidly." | It requires about half the time to complete implementation or compliance projects with our templates. If your employees have never applied the specific standard or regulation, it will probably take them numerous attempts to get it right. |
| "Our employees understand standards or regulations. They'll search through the | Those implementing the standard or complying with the regulation for the first |

standard or regulation and make sure that nothing gets overlooked.”

time are 5 times more likely to fail a certification or compliance audit. It isn't easy to understand the criteria for the certification or compliance audit by merely reading the standard or regulation.

Advisera gives you guidelines on how to implement the standard or become compliant with the regulation through document templates, video tutorials, document reviews, and one-on-one meetings.

Those free documents you find online are typically missing one-third of the documented information the standard or regulation requires.

Our toolkits encompass all mandatory documents required by the standard or regulation, and also some non-mandatory documents that are commonly used.

Those free toolkits have templates collected from multiple sources and authors. This means documents are based on different structures, and may not even observe the same rules.

One team of experts developed all of our documents, keeping them coherent and related. To assist you in understanding interactions between documents, every document is cross-linked with its accompanying documents.

Free toolkits usually have an inadequate structure.

Our toolkits are highly aligned with the needs of small- and medium-sized companies. Templates are placed in folders, in the exact sequence in which they need to be implemented.
